

MEDICAL INFORMATICS SPECIAL SEMINAR

“Future Directions in Medical Informatics”

Thomas M. Deserno, PhD

Peter L. Reichertz Institute for Medical Informatics of TU Braunschweig and Hannover Medical School Braunschweig, Germany

**THURSDAY, FEBRUARY 15, 2024
3 PM | MOSS AUDITORIUM (A2-342 MDCC)**

As the number of elderly people steadily increases and the number of qualified health professionals decreases, we need to change the medical paradigm and avoid serious illnesses and medical emergencies (e.g., chronic diseases, stroke, and heart failure). Preventive medicine, supported by digital technology, is the key to our future health. This presentation will address the role of medical informatics in supporting this paradigm change and give examples for continuous health monitoring in private spaces such as homes and vehicles and shared mobility devices.
